### IMPORTANT

The motor drive for LiveIn must be installed and configured by a professional in home motorisation and automation, in accordance with SIMU instructions and applicable regulations in the country of installation.

\*List of compatible equipments tested on 1/10/2017

To ensure your equipment is compatible with LiveIn solution, we invite you to get closer to an installer dealer

\*\* LiveIn solution cannot be used to do the setting of a favourite position ; this one should be done with an individual Simu-Hz control point if motor equipped with this function.

\*\*\*Only available on motors equipped with sun function.

Official document - 16/10/2017 - Page 2/2

**Equipments Simu-Hz NOT COMPATIBLE WITH LIVEIN**

LiveIn is a connected solution providing local and remote control of compatible equipment of the building (roller shutters, blinds, garage doors etc.) from a smartphone or touch tablet. **In view of the possibility of controlling such equipment remotely and out of the User's sight, SIMU forbids the use of LiveIn solution with the sequential command equipments listed below that is to say the equipments that don't give the possibility to the User to know what command was sent.**

RSA Hz receiver box

**NOT COMPATIBLE LIVEIN**

Standard receiver SA Hz

**Precautions when using LiveIn with some equipments**

**Warning:** Some power operating systems do not include intrinsic obstacle detection devices, and generate large forces that can lead to injury or damage to property. In order to keep users safe, obstacle detection devices must be installed, such as sensitive feeling edges, photoelectric cells or any other safety device, on all the areas of gates, garage doors or roller shutters presenting a risk of trapping or cutting. These mandatory regulatory requirements may vary depending on the country of installation. SIMU asks the installer, a professional in home motorisation and automation, to refer to the specific instructions for the equipment installed and to the applicable standards. Contact SIMU for further information, or in case of doubt.

- In accordance with standard EN 12453 relating to the safety in use of power-operated doors and gates, the use of the LiveIn unit to control an automated garage door or gate out of the sight of the User makes it mandatory to install a safety device such as a photocell on the automated system.

The installer acknowledges being aware of these instructions and have taken steps to ensure compliance with them in installing and using the products. The installer must train the user in the correct use of this equipment and alert the user to the risks inherent to operating this equipment remotely. SIMU shall not be liable for any damage if the User fails to comply with these instructions.
