Gray, France – 9th September 2020

SD350 CONTROL BOARD : essential to control three-phase motors

Made in France, the SIMUDRIVE SD350 control box is used to control industrial rolling doors. It can be associated with the whole range of three-phase SIMU motors: T9 and SIMUBOX non EI.

Intuitive wiring and simplified start-up save valuable time during installation.

QUICK INSTALLATION

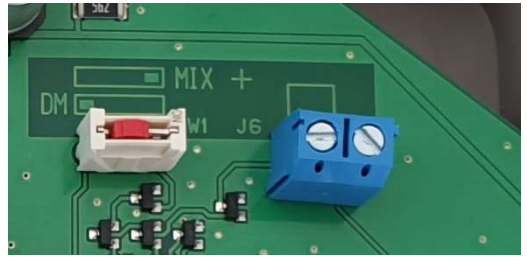

With clearly identified connections and ample space to wire, installation is done in minutes.

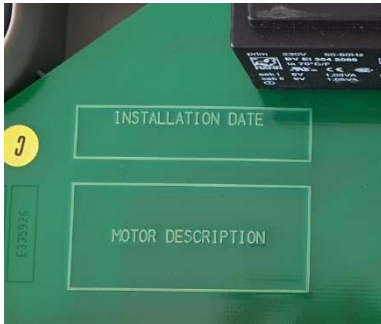

In addition to the safety brake, which must be connected to the control box, it is possible to connect a keyswitch.

IMMEDIATE START-UP

To get to the point, two control modes are possible: control of the door in maintained press mode or in mixed mode (if the installation allows it). The choice of mode is made by simple toggle switch.

EASY MAINTENANCE

A place is reserved in the box to note the date of installation, as well as a second to paste the removable motor label.

Thus in the event of maintenance or after-sales service, it is easy to find the history of the installation and the type of motor used.

This product is available under the reference 2009611.
